

MEMORYALIGNER

Powered by Graphy

Instructions to Patients

- Use the **first two** sets of aligners (upper and lower) for 2 weeks each, 4 weeks in total.
Then 1 week each for the remaining aligners (number 3 onwards).
 - Wear the aligners all the time except for when eating and brushing.
 - Don't be without the aligners for more than 2 hours a day, otherwise the teeth might not move as predicted.
 - Make sure the aligners are fitting properly, otherwise the teeth won't move as predicted and the aligners might fracture.
 - Putting on the aligners: It's recommended to put the aligners in warm water to soften them, so they fit easily. They will gradually harden into the planned design when exposed to mouth temperature.
 - Removing the aligners: If the aligners are difficult to remove, rinse your mouth with warm water to soften them, then they come out easily.
 - Cleaning the aligners: You can put them in boiling water (up to 1 min) for disinfection or use cleaning products suitable for aligners.
- *Please note:** Other aligner brands or retainers may permanently deform if exposed to warm temperatures.
